

BBA-H502

TRAINING & DEVELOPMENT

Semester Exam Preparation – Important Questions with Clear Answers

Degree	BBA	Course Code	BBA-H502
Category	DSE	Semester	V
Credits	4 (L-T-P: 3-1-0)	Session	2024–28
Prerequisites	HRM basics, Organizational Behaviour and interpersonal skills		

How to use this PDF: First learn the definitions and frameworks, then practice writing 5–8 mark answers using the listed points and examples. Questions marked across all modules cover the most exam-relevant concepts from the provided syllabus.

MODULE I – TRAINING & DEVELOPMENT

Q1. What is training? Explain its objectives.

Answer: Training is a planned process through which employees acquire or improve knowledge, skills, attitudes and abilities required to perform their present jobs effectively.

- Improve job performance and productivity
- Reduce errors, accidents and wastage
- Prepare employees for changing technology and work methods
- Increase employee confidence and motivation
- Develop a positive attitude toward work and the organization

Simple example: Example: A company trains new sales executives in product knowledge, communication and CRM software before assigning them to customers.

Q2. Explain the scope of training and development.

Answer: The scope of training is broad and covers learning at different organizational levels and for different purposes.

- Induction/orientation training for new employees
- Technical and job-skill training
- Soft-skill and interpersonal training
- Safety and compliance training
- Leadership and management development
- Digital, technology and change-related training
- Career and continuous development

Q3. Who are the beneficiaries of training?

Answer: Training benefits employees, the organization and society/customers. It creates a win-win situation when training is relevant and properly implemented.

- Employees: better skills, confidence, career growth and job satisfaction
- Organization: higher productivity, quality, retention and adaptability
- Customers: better service and fewer errors
- Society: improved employability and professional competence

Q4. What are the major forces influencing working and learning?

Answer: Work and learning are influenced by internal and external changes that determine what employees must learn.

- Technological change and automation
- Globalization and competition
- Changing customer expectations
- Demographic and workforce diversity
- Economic and social changes
- New laws and regulations

- Organizational restructuring and new business strategies
- Need for continuous learning

Q5. Give a snapshot of modern training practices.

Answer: Modern organizations increasingly use flexible, technology-supported and learner-centered training instead of relying only on classroom lectures.

- Blended learning: classroom + online learning
- E-learning and mobile learning
- Virtual classrooms and webinars
- Microlearning through short learning modules
- Simulation, games and experiential learning
- Coaching, mentoring and on-the-job learning
- Learning Management Systems (LMS)
- Data-based evaluation and personalized learning

Q6. What are the major problems in training?

Answer: Training may fail when it is not connected with organizational needs or when implementation and follow-up are weak.

- Incorrect identification of training needs
- Insufficient budget or time
- Low employee motivation
- Poor trainer quality
- Outdated content
- Lack of management support
- Poor transfer of learning to the job
- Difficulty in measuring training results

Q7. Explain future trends in training and development.

Answer: Future training is expected to become more digital, personalized, continuous and closely linked with business results.

- AI-assisted and personalized learning
- Virtual reality and simulation-based training
- Short, mobile-first learning
- Skill-based and competency-based development
- Continuous learning instead of one-time programs
- Learning analytics and evidence-based decisions
- Greater focus on reskilling and upskilling

MODULE II – NEEDS ASSESSMENT AND TRAINING DESIGN

Q8. What is Training Needs Assessment (TNA)? Why is it important?

Answer: Training Needs Assessment is a systematic process of identifying the gap between the knowledge, skills and abilities employees have and those required for effective performance.

- Identifies who needs training and why
- Prevents unnecessary training expenditure
- Helps set clear learning objectives
- Provides a basis for designing relevant content
- Connects training with organizational performance

Simple example: Example: If customer complaints increase because employees cannot use a new billing system, TNA identifies software training as the need.

Q9. Explain the Training Needs Assessment process.

Answer: A typical TNA process moves from identifying the performance problem to selecting an appropriate learning solution.

- Identify organizational goals and performance problems
- Conduct organizational analysis
- Conduct task/operational analysis
- Conduct person analysis
- Identify knowledge, skill and ability gaps
- Prioritize training needs
- Set measurable training objectives
- Use findings to design the training program

Q10. Explain organizational analysis in TNA.

Answer: Organizational analysis determines where training is needed and whether training supports organizational strategy.

- Study business goals, strategy and future plans
- Identify departments or units facing performance problems
- Review resources, technology and culture
- Check management support and training climate
- Determine whether training is the correct solution

Q11. What is operational/task analysis?

Answer: Operational or task analysis identifies the duties, activities, standards and competencies required to perform a particular job successfully.

- Study job descriptions and job specifications
- Identify major tasks and performance standards
- Determine knowledge, skills and abilities required
- Identify gaps between required and actual competencies

- Convert gaps into training objectives

Q12. Explain methods and techniques of TNA.

Answer: Organizations use both formal and informal techniques to collect information about performance and learning needs.

- Interviews with managers and employees
- Questionnaires and surveys
- Observation of job performance
- Performance appraisal records
- Tests and skill assessments
- Focus groups
- Job/task analysis
- Customer complaints and quality records
- Organizational reports and productivity data

Q13. What factors affect training design?

Answer: Training design is influenced by the learner, the job, the organization, available resources and the desired learning outcomes.

- Training objectives and expected outcomes
- Learner characteristics and prior knowledge
- Nature and complexity of the job
- Time and budget
- Trainer competence
- Learning environment and technology
- Organizational culture and management support
- Number and location of participants

Q14. Explain budgeting for training and costs involved.

Answer: Training budgeting means estimating and allocating money required to plan, deliver and evaluate a training program.

- Direct costs: trainer fees, venue, materials, travel and equipment
- Indirect costs: employee time away from normal work and administrative time
- Technology costs: LMS, software, platforms and digital content
- Evaluation costs: tests, surveys and data analysis
- Contingency costs: unexpected expenses

Simple example: Example: A company conducting a two-day workshop may budget trainer fees, hall rent, food, printed material, travel and employee time.

Q15. What is training design? Explain its outcomes.

Answer: Training design is the systematic planning of learning objectives, content, methods, activities, resources and evaluation before training is delivered.

- Clear learning objectives
- Relevant training content
- Suitable instructional methods
- Defined trainer and learner roles
- Required materials and facilities
- Assessment and evaluation plan
- Expected knowledge, skill, attitude and job-performance outcomes

Q16. Explain alternative methods of instruction.

Answer: Different instructional methods should be selected according to the learning objective, learner group, job requirements and available resources.

- Lecture/presentation: useful for explaining information to many learners
- Discussion: useful for exchanging ideas
- Demonstration: useful for showing a procedure
- Case study: develops analysis and decision-making
- Role play: develops interpersonal and communication skills
- Simulation: provides realistic practice with lower real-world risk
- On-the-job training: learning while performing actual work
- E-learning/blended learning: flexible technology-supported learning

Q17. What considerations make a training program effective?

Answer: An effective program is relevant, learner-centered, practical and supported by the organization.

- Conduct proper needs assessment
- Set SMART and measurable objectives
- Match methods with objectives
- Use practical activities and examples
- Provide qualified trainers
- Maintain suitable learning conditions
- Give feedback and practice
- Plan post-training support and transfer
- Evaluate outcomes

Q18. Explain training implementation and logistical/physical arrangements.

Answer: Training implementation is the actual execution of the planned training program. Good implementation ensures that the right people, place, resources and schedule are ready.

- Logistical: participant list, schedule, invitations, trainer availability, travel and refreshments
- Physical: room size, seating, lighting, ventilation, projector, sound system, internet and materials
- Check equipment before the session
- Provide clear instructions and time schedule
- Keep backup materials and technical support available

- Create a comfortable and distraction-free environment

Q19. Give tips for effective training implementation.

Answer: Effective implementation requires preparation, participation and continuous monitoring during delivery.

- Start with clear objectives and expectations
- Create an interactive environment
- Use simple examples related to the job
- Encourage questions and participation
- Manage time properly
- Observe learner understanding
- Give immediate constructive feedback
- Handle technical problems calmly
- End with summary, assessment and next steps

MODULE III – TRAINING METHODS & TRAINER'S STYLE

Q20. Explain the major types of training.

Answer: Training can be classified according to where, when and how learning occurs.

- On-the-job training: learning at the actual workplace
- Off-the-job training: learning away from the normal workplace
- Induction/orientation training
- Technical or functional training
- Soft-skills training
- Safety/compliance training
- Management and leadership development
- Refresher, retraining, reskilling and upskilling

Q21. Explain presentation methods of training.

Answer: Presentation methods mainly involve the trainer communicating information to learners in a structured manner.

- Lecture: efficient for delivering large amounts of information
- Audio-visual presentation: improves attention through visuals/video
- Conference/seminar: supports expert interaction and discussion
- Best suited for knowledge and awareness objectives

Q22. Explain hands-on training methods.

Answer: Hands-on methods require learners to actively practice a task, procedure or skill.

- On-the-job training
- Demonstration and practice
- Simulation
- Role playing
- Case-based exercises
- Useful for developing practical, technical and behavioral skills

Q23. Explain group-building methods.

Answer: Group-building methods improve teamwork, communication, trust and problem-solving among participants.

- Team-building exercises
- Group discussions
- Problem-solving activities
- Outdoor/experiential activities
- Action learning
- Useful when collaboration and interpersonal effectiveness are important

Q24. How should an organization choose a training method?

Answer: The method should be selected by matching the learning objective and learner characteristics with the strengths, cost and feasibility of each method.

- Nature of learning objective
- Number and type of learners
- Learner experience and preferences
- Time available
- Budget
- Need for practice and feedback
- Work environment and technology
- Trainer capability
- Need for transfer to the job

Q25. What competencies and skills should a trainer possess?

Answer: A competent trainer combines subject knowledge with communication, facilitation and learning-management skills.

- Subject-matter knowledge
- Communication and presentation skills
- Questioning and listening skills
- Classroom/facilitation skills
- Ability to motivate learners
- Use of technology and training aids
- Time and group management
- Feedback and evaluation skills
- Adaptability and emotional intelligence

Q26. Explain trainer styles.

Answer: Trainer style refers to the way a trainer interacts with learners and manages the learning process.

- Authoritative/directive: trainer controls content and process
- Facilitative: trainer guides learners and encourages participation
- Coaching style: trainer focuses on individual improvement and feedback
- Democratic/participative: learners actively contribute to decisions and discussions
- Effective trainers adapt their style according to learner needs and situation

Q27. What is the Trainer Grid?

Answer: The trainer grid can be understood as a framework for considering the trainer's concern for task/content and concern for learners/people. Effective training balances both.

- High task + low people: strong focus on content but may reduce participation
- Low task + high people: supportive but may lack direction
- Low task + low people: weak training involvement
- High task + high people: balanced approach with clear goals and learner support

Q28. Explain the roles of a trainer.

Answer: A trainer performs multiple roles before, during and after training.

- Planner: identifies objectives and prepares the program
- Instructor: explains knowledge and procedures
- Facilitator: encourages participation
- Coach: helps individuals improve
- Motivator: builds interest and confidence
- Evaluator: measures learning and training results
- Counsellor/mentor: supports development where appropriate

Q29. What are the do's and don'ts for trainers?

Answer: Good trainer behavior improves learning, credibility and participation.

- Do: prepare well, know the learners, communicate clearly, encourage questions, use examples, manage time, give feedback
- Do: respect different opinions and maintain a positive environment
- Don't: read slides continuously, dominate every discussion, embarrass learners, ignore questions, overload content, arrive unprepared or depend completely on technology

MODULE IV – TRAINING EVALUATION

Q30. What is training evaluation? Why is it necessary?

Answer: Training evaluation is the systematic assessment of whether a training program achieved its learning and organizational objectives.

- Determines whether learning occurred
- Measures transfer to the job
- Identifies strengths and weaknesses
- Improves future programs
- Justifies training expenditure
- Provides evidence for management decisions

Q31. What factors influence transfer of learning?

Answer: Transfer of learning means applying what was learned in training to the actual job. It depends on the learner, training and work environment.

- Quality and relevance of training
- Learner motivation and ability
- Opportunity to practice
- Supervisor support and feedback
- Peer support
- Availability of tools and resources
- Reward and performance systems
- Similarity between training and job conditions

Q32. Explain the training evaluation process.

Answer: Evaluation should be planned along with training rather than added only after completion.

- Define evaluation objectives
- Determine desired outcomes and indicators
- Select evaluation design and data sources
- Collect baseline/pre-training information where possible
- Measure learning and reaction
- Measure behavior/job performance
- Measure organizational results
- Analyze and interpret data
- Report findings and recommend improvements

Q33. What are training outcomes?

Answer: Training outcomes are the results expected from a training program and can be measured at different levels.

- Reaction: learner satisfaction and perceived usefulness

- Learning: change in knowledge, skills or attitudes
- Behavior: application of learning at work
- Results: impact on productivity, quality, sales, cost, safety or other organizational measures

Q34. Explain major techniques of training evaluation.

Answer: Evaluation techniques are tools used to collect evidence about the effectiveness of training.

- Questionnaires and feedback forms
- Knowledge/skill tests
- Observation of job behavior
- Interviews and focus groups
- Performance records
- Before-and-after comparisons
- Control/comparison groups where feasible
- Cost-benefit or ROI analysis

Q35. Explain Kirkpatrick's four levels of training evaluation.

Answer: Kirkpatrick's model evaluates training at four levels, moving from immediate learner response to organizational impact.

- Level 1 – Reaction: How did learners feel about the training?
- Level 2 – Learning: What knowledge, skills or attitudes were gained?
- Level 3 – Behavior: Are learners applying the learning at work?
- Level 4 – Results: What organizational results occurred?

Simple example: Example: After sales training, a company may measure satisfaction (L1), product-knowledge test scores (L2), use of new sales techniques (L3), and sales growth (L4).

Q36. What is a training audit?

Answer: A training audit is a systematic review of an organization's training policies, processes, resources, programs and results to determine their effectiveness and alignment with business needs.

- Reviews training policies and objectives
- Checks needs assessment and program design
- Examines trainers, materials, budget and facilities
- Reviews participation, learning and transfer
- Assesses records, evaluation and outcomes
- Identifies gaps and recommends improvements

MODULE V – MANAGEMENT DEVELOPMENT

Q37. What is management development? Explain its need and importance.

Answer: Management development is a planned process of improving managers' knowledge, skills, attitudes and capabilities so that they can perform current roles and prepare for future responsibilities.

- Builds leadership and decision-making ability
- Prepares managers for higher responsibilities
- Supports succession planning
- Improves strategic thinking and problem-solving
- Helps managers handle technological and organizational change
- Improves organizational effectiveness

Q38. Explain training for executive-level management.

Answer: Executive development focuses on strategic, leadership and organizational capabilities rather than only technical job skills.

- Strategic management and business thinking
- Leadership and change management
- Decision-making under uncertainty
- Financial and commercial understanding
- Negotiation and stakeholder management
- Ethics and corporate governance
- Innovation and digital transformation
- Executive coaching and mentoring

Q39. Explain approaches to management development.

Answer: Organizations use multiple approaches because managerial competence develops through education, experience, relationships and reflection.

- On-the-job assignments and job rotation
- Coaching and mentoring
- Action learning
- Case studies and management games
- Executive education and workshops
- Committee/project assignments
- Assessment centers
- Job enrichment and special assignments

Q40. Explain the management development planning process.

Answer: Development planning identifies future managerial requirements and creates an individual and organizational plan to close capability gaps.

- Identify organizational and future leadership needs
- Assess current managerial competencies

- Identify competency gaps
- Set development objectives
- Select development methods and assignments
- Prepare an individual development plan
- Implement the plan
- Monitor progress and evaluate results
- Revise the plan as needs change

Q41. Explain company strategies for providing management development.

Answer: Companies can combine formal programs with workplace experiences to create a strong management-development system.

- Build internal leadership-development programs
- Use mentoring and coaching
- Create succession and talent-management systems
- Provide cross-functional assignments
- Use job rotation and stretch assignments
- Sponsor executive education
- Create leadership competency frameworks
- Use regular performance and development reviews
- Support continuous learning and knowledge sharing

LAST-MINUTE REVISION SHEET

Module I: Training = planned learning for better job performance. Focus: scope, objectives, beneficiaries, forces, current practices, problems and future trends.

Module II: TNA = identify performance/competency gaps. Remember: Organizational analysis → Task/Operational analysis → Person analysis → Training objectives → Design → Implementation.

Module III: Methods: Presentation, Hands-on, Group-building. Choose method according to objective, learner, time, cost, practice and transfer. Trainer = planner + instructor + facilitator + coach + motivator + evaluator.

Module IV: Evaluation: Reaction → Learning → Behavior → Results (Kirkpatrick). Transfer depends on learner, training and work environment. Training audit checks the whole training system.

Module V: Management development prepares current/future managers. Key approaches: coaching, mentoring, job rotation, action learning, assessment centers, executive education and stretch assignments.

High-priority long-answer topics: TNA process; organizational and operational analysis; training design and costs; training implementation; methods of training; trainer skills/styles/roles; Kirkpatrick model; transfer of learning; training audit; management development process and approaches.

Prepared as an exam-oriented study guide from the syllabus supplied in the prompt. For university-specific wording, also revise classroom notes and previous-year papers.
